

Appl. No. 10/840,065
Amdt. dated Aug. 25, 2006
Reply to Office action of June 12, 2006

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (currently amended) A insole insert for shoes for height re-orientation of user comprising,

a removable insole insert of synthetic resin foam material having a tapered foot engagement upper surface, oppositely disposed depending sidewall surfaces and an arcuate back heel surface,

a flat bottom portion and a tapered bottom heel portion,

~~said side surfaces~~ said side wall surfaces contoured laterally defining an area of maximum transverse dimension between a tapered upper front heel portion surface and a tapered upper foot portion surface ~~therebetween~~ in longitudinally spaced relation to said arcuate heel surface,

said insert is of a monolithic mass and is sculptured into said shaped configuration and said area of maximum transverse dimension defines the tapered upper foot engagement surface front portion is of a known

upper surface area less than that of said tapered upper front heel portion surface.

~~said side surface contoured laterally with a tapered foot portion and a correspondingly tapered rear portion.~~

2. (currently amended) The insole insert set forth in claim 1 wherein said synthetic resin foam is of a cross linked polyethylene composition having an initial yielding then supportive composition.

3. (canceled)

4. (original) The insole insert set forth in claim 1 wherein said tapered upper foot engagement surface and said tapered bottom heel portion are in parallel spaced relation to one another.

5. (canceled)

6. (canceled)

7. (currently amended) The insole insert set forth in claim 1 wherein said tapered foot engagement upper surface provides an angular increasing surface height from front to back terminating at said arcuate back heel surface.

8. (original) The insole insert set forth in claim 1 wherein said transition from said bottom flat surface to said tapered bottom heel portion is longitudinally inward of said arcuate back heel surface junction therewith and with said junction of said tapered foot engagement upper surface.
